Learning and Teaching Materials

Build Relevant Skills

# Supercharge Your Child's Education with Future Ready Learning Materials.

We design child-appropriate learning materials on STEM-related subjects for 21st century learning skills. Our learning materials are developed by experienced and subject expertise teachers across the nation making them usable for classroom and outside of classroom learning. In addition, we provide teaching materials for teachers to use during teaching sessions.

## Learning and teaching materials are available for both on-screen and off-screen learning.

● We make it easier for families to access learning materials related to KSSR core subjects. You and your child can use learning materials to learn digitally or physically at anytime, anywhere and across devices.

● As for teachers, we provide an extension of the teaching materials in the form of lesson plans and performance-based classroom activities, resulting in reducing the time needed to create or find these materials and focus on the most important aspect of being a teacher – to teach!

## A Safe Space for Community Engagement.

● We ensure your child's safety and privacy is our top priority from being exploited by unwanted individuals. Children can communicate with like-minded children on topics that are child appropriate without any harmful content published in their community. Each content and message are closely monitored by our team to reduce unethical conversations that are not educational and not appropriate within their age.

● While for parents and teachers, we design specific topics in a personalised community section to discuss in a safe space to exchange ideas, share tips needed to solve current roadblocks and challenges.

## Develop Relevant Skills Set for A Better Version of Yourself.

● Excelling in academic achievement is important and so do other skills. At MindLoops, we design our learning modules for the children to develop learning, digital, and living skills for future use.

● We also help parents to develop parenting skills to experience this beautiful journey! We provide educational content that encourages parents to play an active role in the child's upbringing and during their adolescent years.

● Additionally, we provide professional development training for teachers! Watch our videos to increase your knowledge of pedagogical skills and classroom management skills on how to manage your class.

# The benefits of MindLoops for you and your child.
